Profile

Software developer with professional Unreal Engine VR and 3D pipeline experience, and the solo developer of Pokémon Copper, a full-length open-world Pokémon fan game. Seeking gameplay programming or technical/systems design roles.

Game Development

Pokémon Copper — Solo Developer · Pokémon Essentials (RPG Maker XP) · 2023–Present

- Designed and built a full-length open-world RPG over 3 years as the sole developer and designer (sprite art support from one collaborator); released free in 2026
- Created 113 original Pokémon, 10 regional variants, 22 Mega Evolutions, 47 moves, and 10 abilities
- Built open-world progression with level scaling for trainers and wild encounters based on badge count and party level
- Grew a 600+ member Discord and a 33,000-view launch trailer; maintain the game with post-launch patches, a modded Pokémon Showdown server, and a post-game update due Dec 2026

Depictions: Original drawing game, in development for a free Steam release

Pokémon Inverse Emerald: ROM hack of Pokémon Emerald with an inverted type chart and quality-of-life updates

Professional Experience

Software Developer — Sundt Construction · Mar 2026–Present

- Wrote scripts to automate converting geometry into printable box forms for 3D-printed structural models
- Convert construction models into Blender and rebuild and optimize them for 3D printing

Software Developer — Aura Solutions · Aug 2025–Mar 2026

- Tested, diagnosed, and fixed bugs on the public Arizona Department of Transportation (ADOT) website and internal tools, including a team time-reporting site

Software Development Intern — Sundt Construction · May 2024–Dec 2024

- Built an Unreal Engine VR walkthrough of a water treatment plant over 4 months, delivered as a showcase demo for company events
- Developed applications and plugins for the virtual design and construction team

Education

B.S. Computer Science, Game Design emphasis, Cybersecurity minor — Grand Canyon University · April 2025 · GPA 3.97
